

*A Dedication to Excellence.  
A Commitment to the Future.*

Modern  
Continental  
Companies

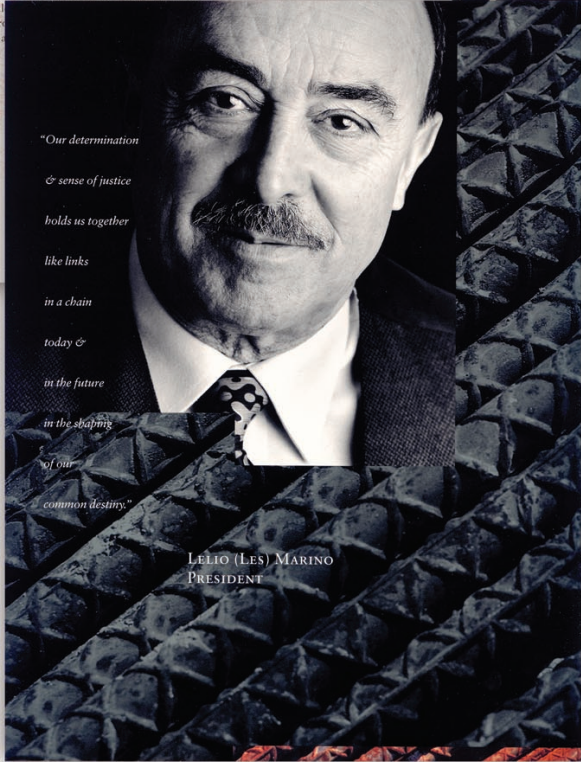

more impressive than the number of structures we create are the people who build them. All are knowledgeable professionals with a profound commitment to excellence — and to their company. In fact, many have been with Modern most or all of their careers. Bringing the right mix of skills and experience to every project they undertake, our people work as a team to solve problems creatively and achieve optimum results. This active talent is the foundation of our growth.

Headquartered in Cambridge, Massachusetts, Modern Continental Companies is a privately-owned general contracting firm. As such, we control and perform the majority of construction services ourselves, enabling us to deliver the highest quality results within the most demanding timeframes and budgets.

*"Our determination  
& sense of justice  
holds us together  
like links  
in a chain  
today &  
in the future  
in the shaping  
of our  
common destiny."*

LELIO (LES) MARINO  
PRESIDENT

*Our approach to construction is simple: Hard work conquers tough jobs; honest business practices yield quality results.*

Modern Continental Companies is one of the largest multi-disciplined construction companies in New England. Founded in 1967, we've grown from an entrepreneurial venture to an established enterprise, employing hundreds of professionals. Relying on exceptional building capabilities, an aggressive management style, and principled business practices, our company has succeeded in positioning itself as a leader in its field.

Modern has established this strong presence by leveraging its strengths in a number of highly-specialized construction disciplines, including:

- Heavy Civil
- Mass Transit
- Highways and Bridges
- Treatment Facilities and Utilities
- Buildings and Foundations
- Marine
- Residential and Commercial Development

Our ability to deliver high-quality services — efficiently and cost-effectively — is evident in the hundreds of projects we have completed in these and many other major areas of construction.

**BIRD ISLAND FLATS TUNNEL**  
Boston, Massachusetts  
In constructing this 4,000-foot cut-and-cover tunnel at Boston's busy Logan Airport, more than 310,000 of the total 500,000 cubic yards of concrete were poured in just under nine months. In addition, the 90-foot-deep tunnel called for the excavation of nearly 1.4 million cubic yards of earth — 800,000 of which were transported via barge to nearby Spectacle Island.
